

PRODUCT INSTRUCTIONS

Agility Jump Cups

FORMUFIT Agility Jump Cups are designed to snap onto vertical PVC pipe uprights and hold horizontal jump bars in place for dog agility training. Each cup securely grips the upright and supports one jump bar, making it easy to create adjustable-height jumps.

Assembly

To connect FORMUFIT Agility Jump Cups to PVC pipe, perform the following:

	
<p>1</p> <p>Snap the Jump Cups onto the corresponding size vertical uprights. Perform this on each side of the jump.</p>	<p>2</p> <p>Place the jump bar across both jumps cups, assuring that the bar is level.</p>

Securing

It is not recommended to secure Jump Cups in place using any type of cement or fastener, as they need to be moved to accommodate their adjustable height for training. If the Jump Cup does slip down the pipe for any reason, a small amount of electrical tape can be applied to the inside of the jump cup clip to allow them to grip further.
